

**International Technical Seminar on REDD+
Tokyo, 16-17 February 2011**

Global Comparative Study on REDD+

Daniel Murdiyarso

THINKING beyond the canopy

Outline

- Introduction
- How can REDD+ research be best designed?
- Underlying causes of deforestation
- Global REDD architecture
- National REDD+ strategy and policy options
- Key messages

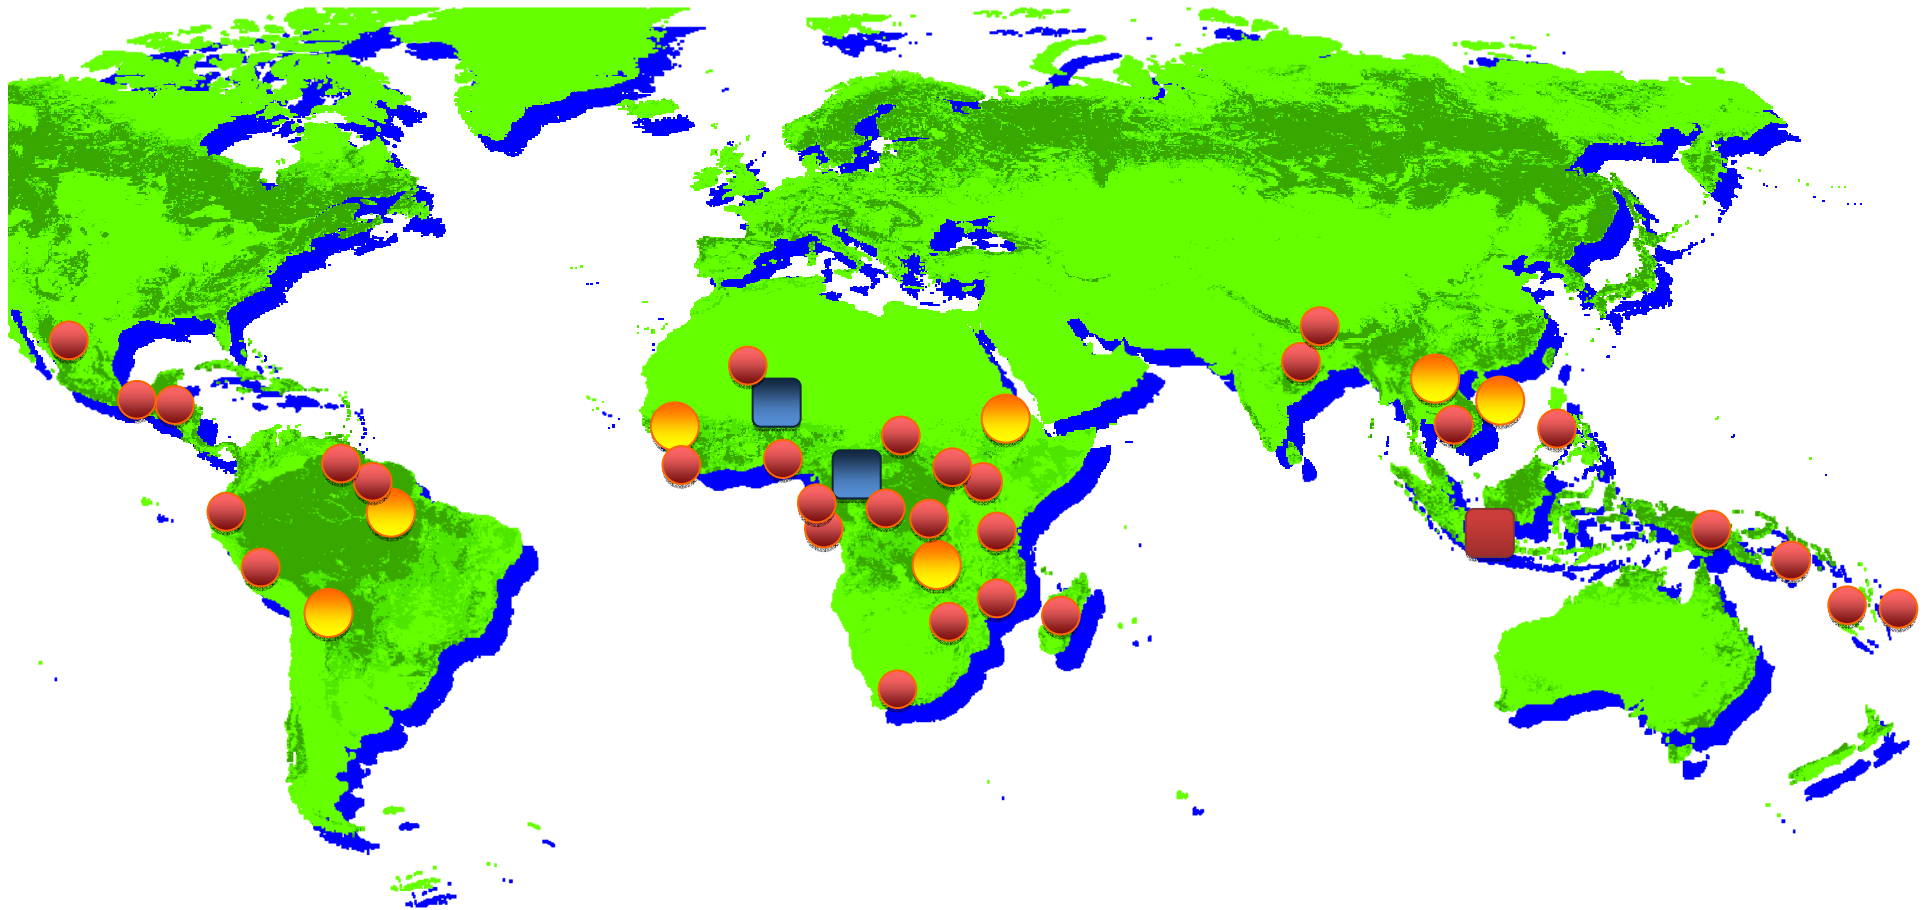

CIFOR

A brief introduction

- Established in 1993
- One of 15 centres in the Consultative Group for International Agricultural Research
- Focus on forest policy research and global comparative studies
- Headquarters in Bogor, Indonesia
- 80 scientific staff working in the major forests of Southeast Asia, Sub Saharan Africa and Latin America
- ‘Centre without walls’

Where we work

3 regional offices, 7 country offices, 37 research sites

Our research strategy

1

Enhancing the role of forests in **mitigating** climate change

2

Enhancing the role of forests in **adapting** to climate change

3

Improving livelihoods through **smallholder** and **community** forestry

4

Managing trade-offs between **conservation** and **development** at the landscape scale

5

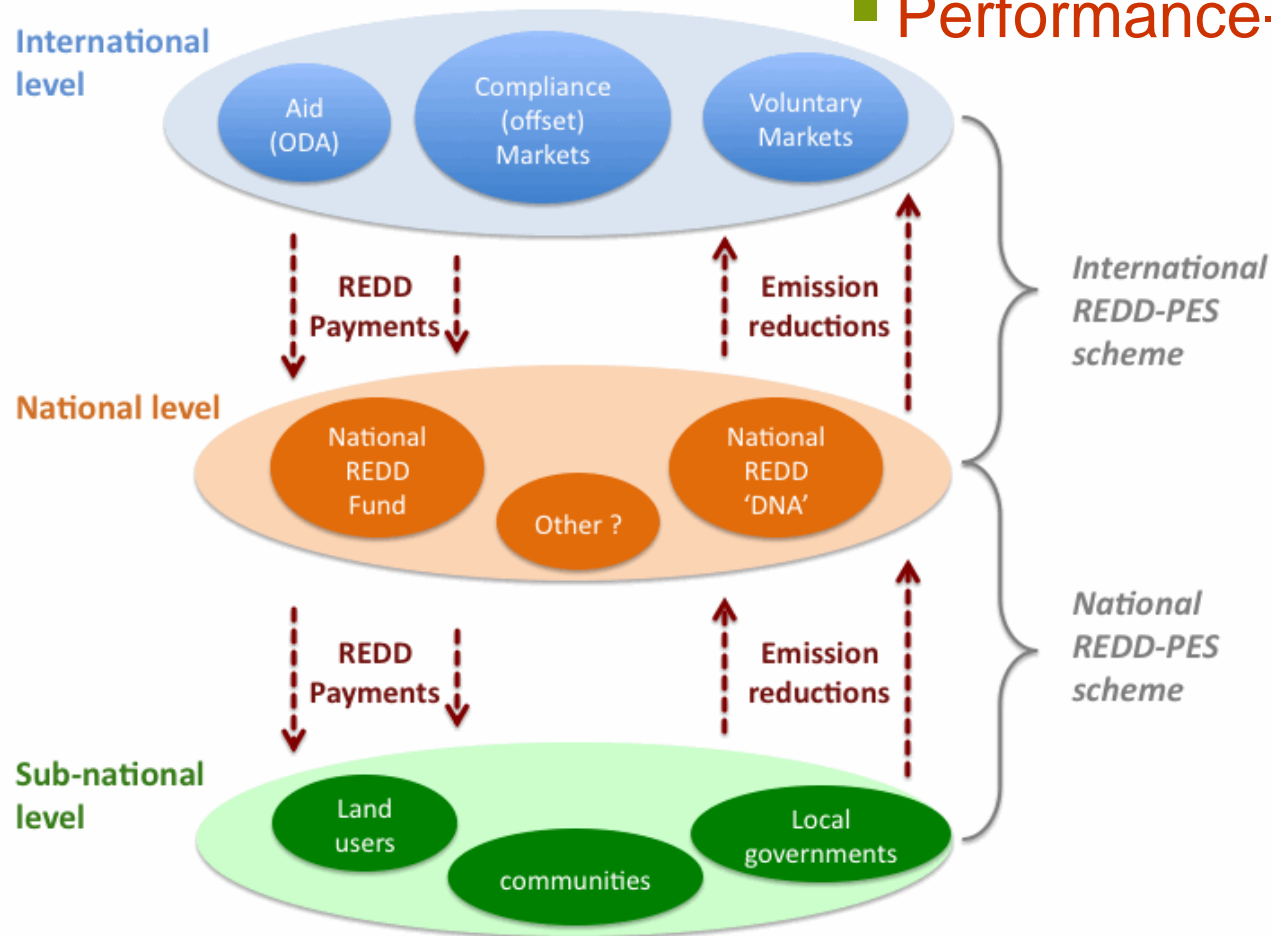

Managing impacts of globalised **trade** and **investment** on forests and forest communities

6

Sustainably managing tropical **production forests**

The core idea of REDD+

- Carbon value of forests
- Performance-based

How can REDD+ research be best designed?

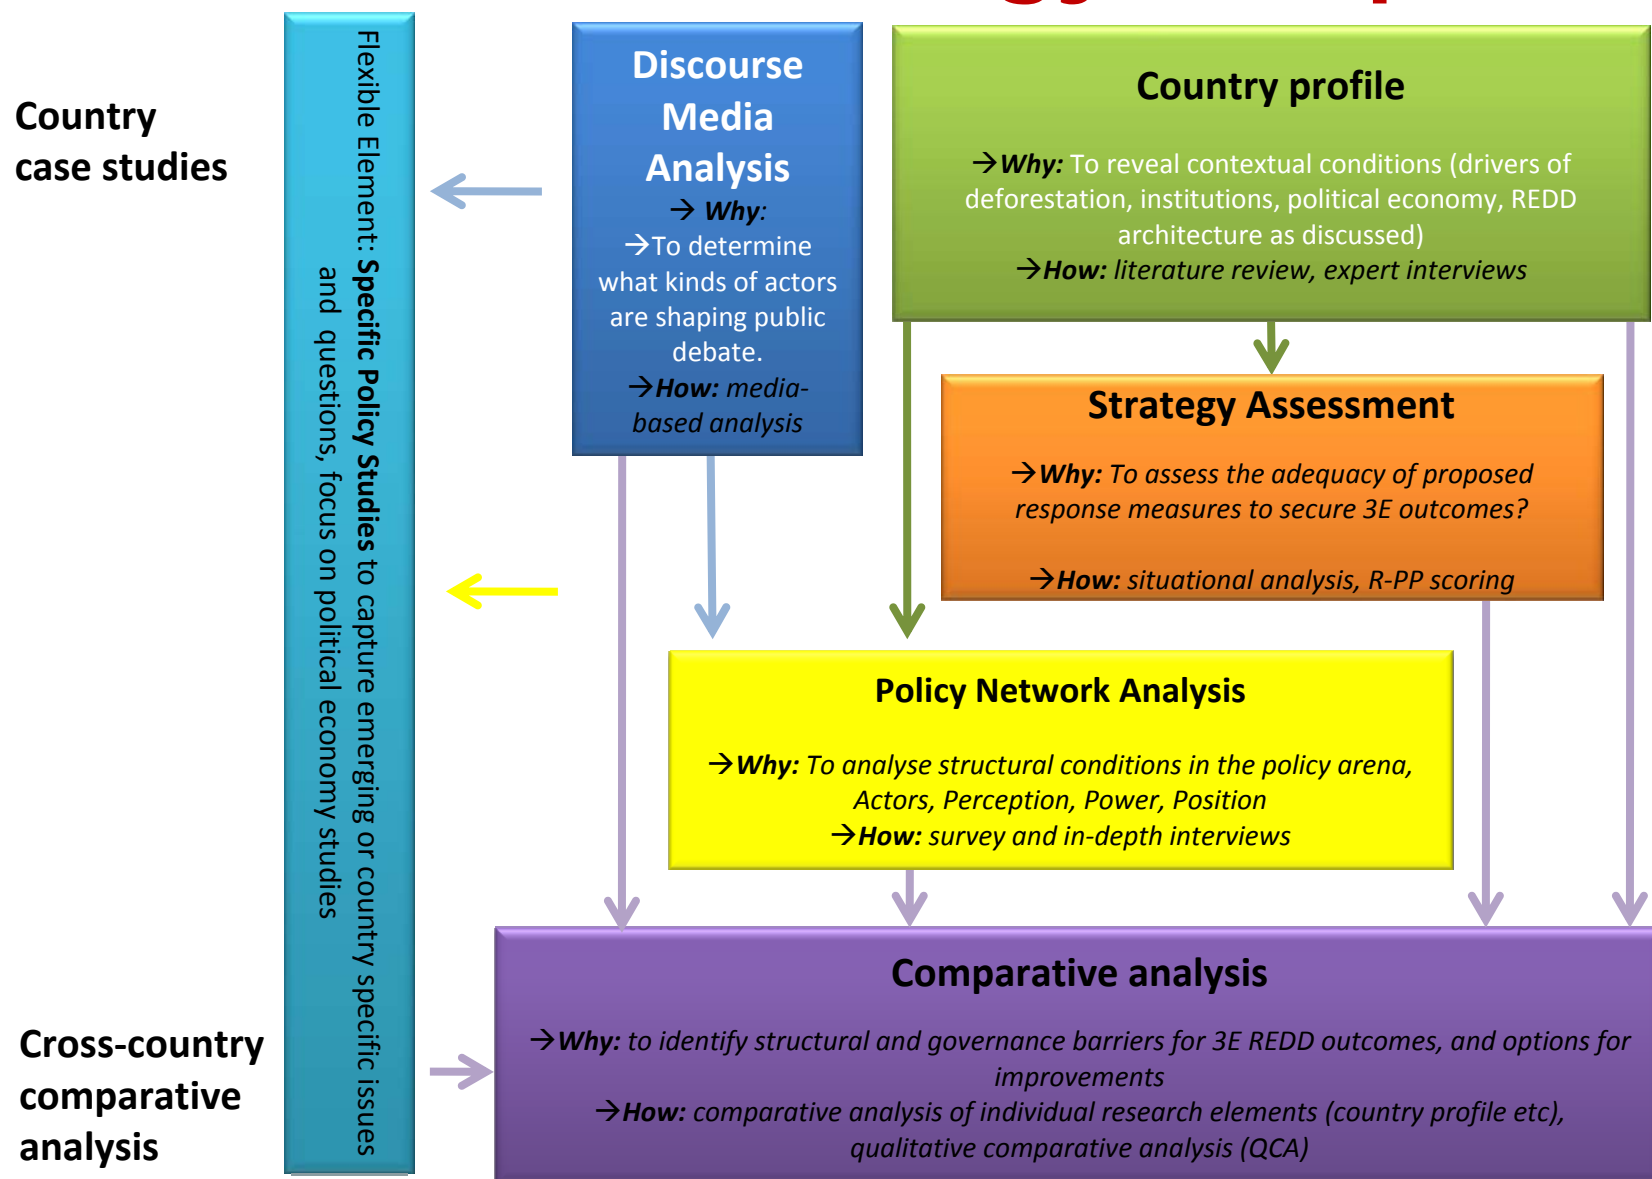

www.forestsclimatechange.org

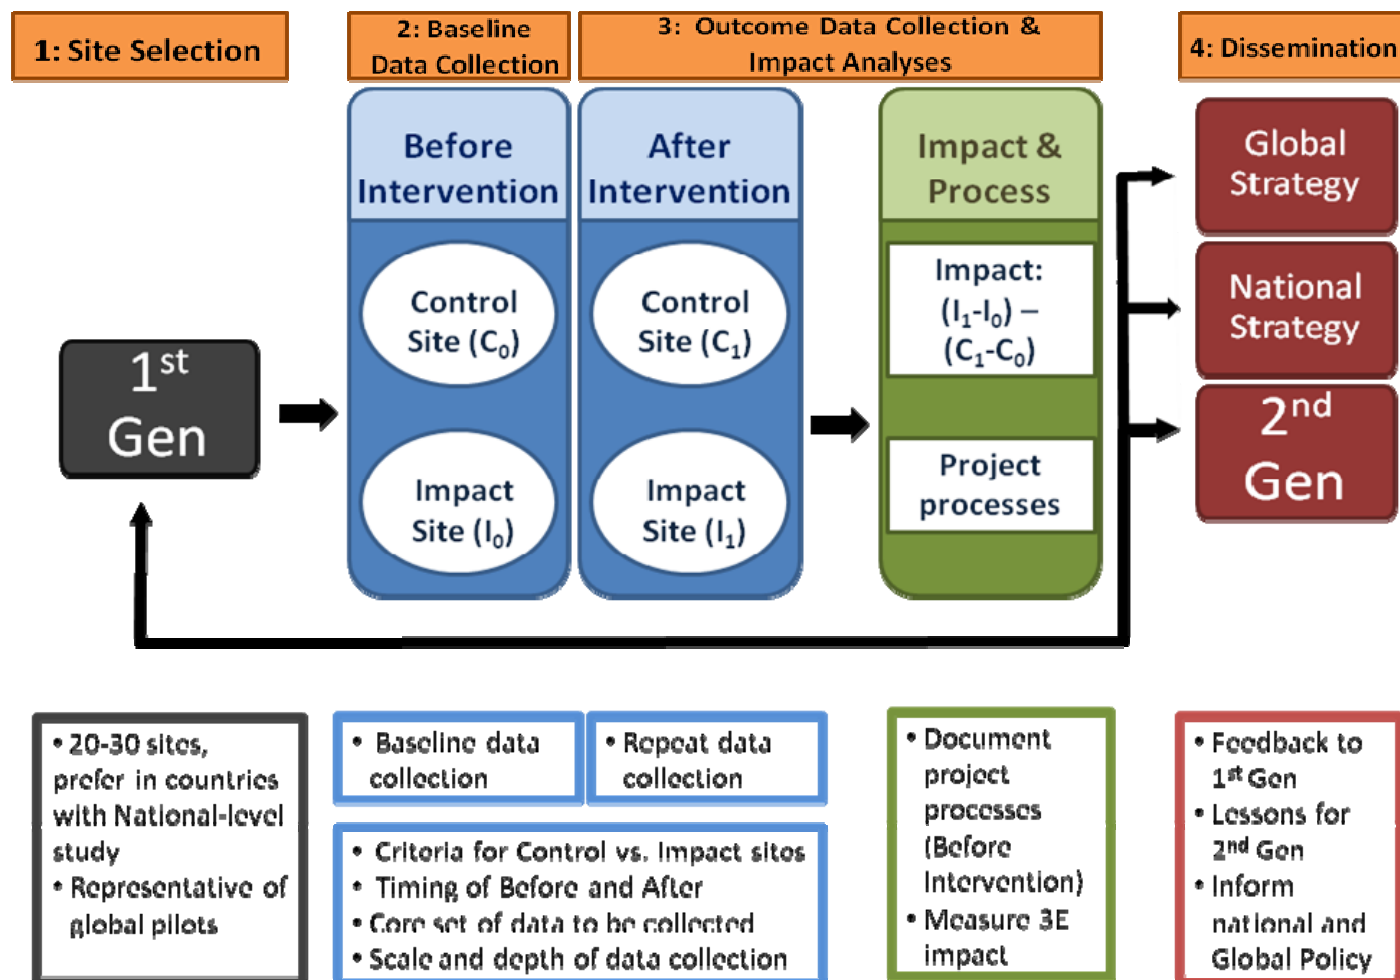

GCS-REDD

- National REDD process and strategies (**Component 1**)
- REDD demonstration activities (**Component 2**)
- Monitoring and reference levels (**Component 3**)
- Knowledge sharing (**Component 4**)

C1: National strategy and processes

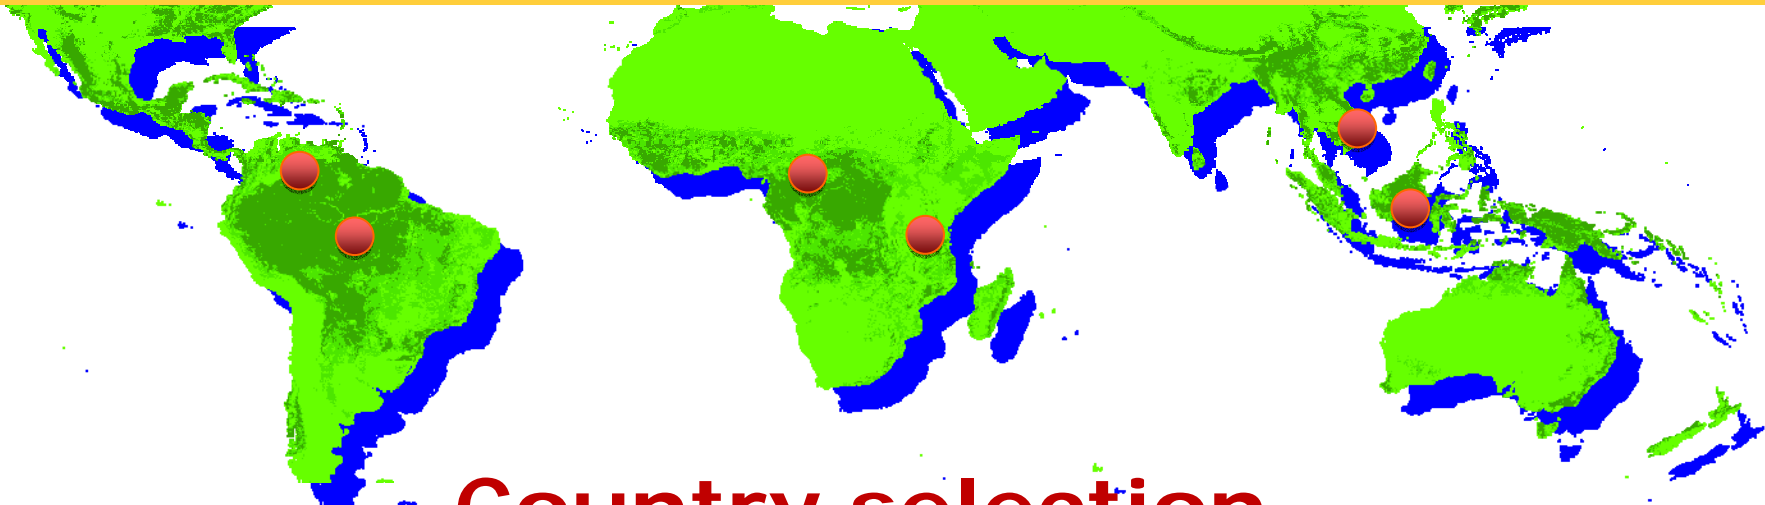

C2: REDD demonstration activities

C3: Monitoring and reference levels

Country selection

	Year 1	Year 2-3
Latin America	Bolivia Brazil	Bolivia Brazil Peru
Africa	Cameroon Tanzania	Cameroon Tanzania DRC
Asia	Indonesia Vietnam	Indonesia Vietnam Nepal

C4: Knowledge sharing

2007 COP13

2008 COP14

2009 COP14

Book on Underlying causes of deforestation CIFOR 2007

Key messages:

- Without understanding the causes – difficult to implement REDD
- Policy options to address REDD
 - Type of instruments
 - Governance mechanisms
 - Inst. strengthening

Drivers of forest carbon change

Book on global REDD architecture CIFOR 2008

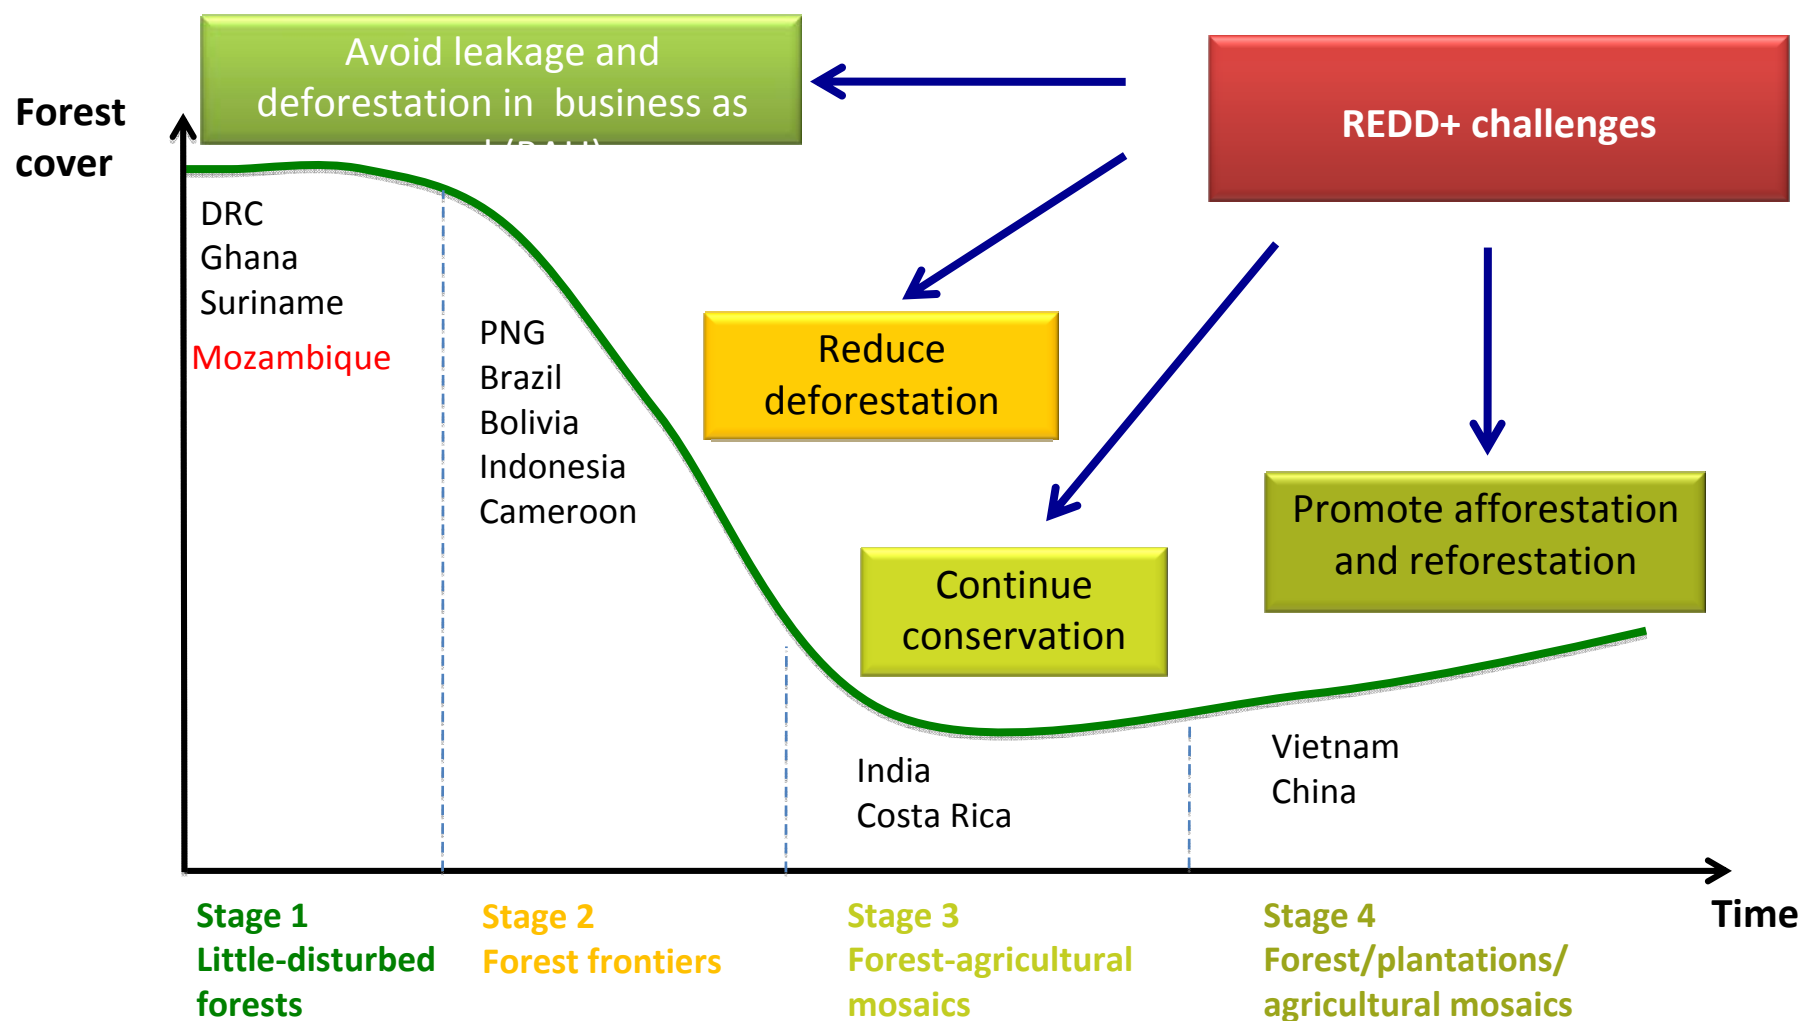

Key messages

- Technical solutions exist

BUT

- Often trade-offs
- Political issues
- Flexibility needed
 - country circumstances
 - learning process

Different national circumstances and challenges

Book on REDD+ at the national level CIFOR 2009

Key facts

- 40+ countries preparing national REDD+ strategies
- 100+ REDD demonstration activities
- > 20 years of forest policy experience

Options assessment

- 3E+: Effectiveness, efficiency, equity, co-benefits
- Options depend on context

Realising REDD+ : National strategy and policy options

- Part 1: Moving REDD+ from global to national level
- Part 2: Building REDD+ institutional architecture and processes
- Part 3: Enabling REDD+ through broad policy reforms
- Part 4: Doing REDD+ by changing incentives
- Part 5: Testing REDD+ through pilots
- Key messages & outlook

THINKING beyond the canopy

Implication 1: Phased approach

	Phase 1: Readiness	Phase 2: Policies and measures (PAMs)	Phase 3: Payments for environmental services (PES)
Scope	RED/REDD/REDD+	REDD/REDD+	REDD+
Crediting scale	Sub national	Nested	Nested or national
Performance indicators	<ul style="list-style-type: none"> - Strategy adopted - Consultations conducted 	<ul style="list-style-type: none"> - Strategy implemented - Policies enacted - Proxies for forest carbon changes 	<ul style="list-style-type: none"> - Quantified forest carbon changes (tCO₂) compared with reference level
Funding	<p>Readiness support fund-based</p> <p>e.g. Forest Carbon Partnership Facility, UN-REDD, bilateral initiatives</p>	<p>Fund-based</p> <p>e.g. Forest Investment Program, Amazon fund, voluntary carbon markets</p>	<p>Primarily market-based, but global fund also possible</p> <p>e.g. carbon markets</p>

Implication 2: Scope of creditable activities

Changes in:	Reduced negative change	Enhanced positive change
Forest area (hectares)	Avoided deforestation (RED)	Afforestation and reforestation (A/R)
Carbon density (carbon per hectare)	Avoided degradation (REDD)	Forest regeneration & rehabilitation (forest carbon stock enhancement = REDD+)

Forest carbon (C) = forest area (ha) * carbon density (C/ha)

Implication 3: Crediting scale

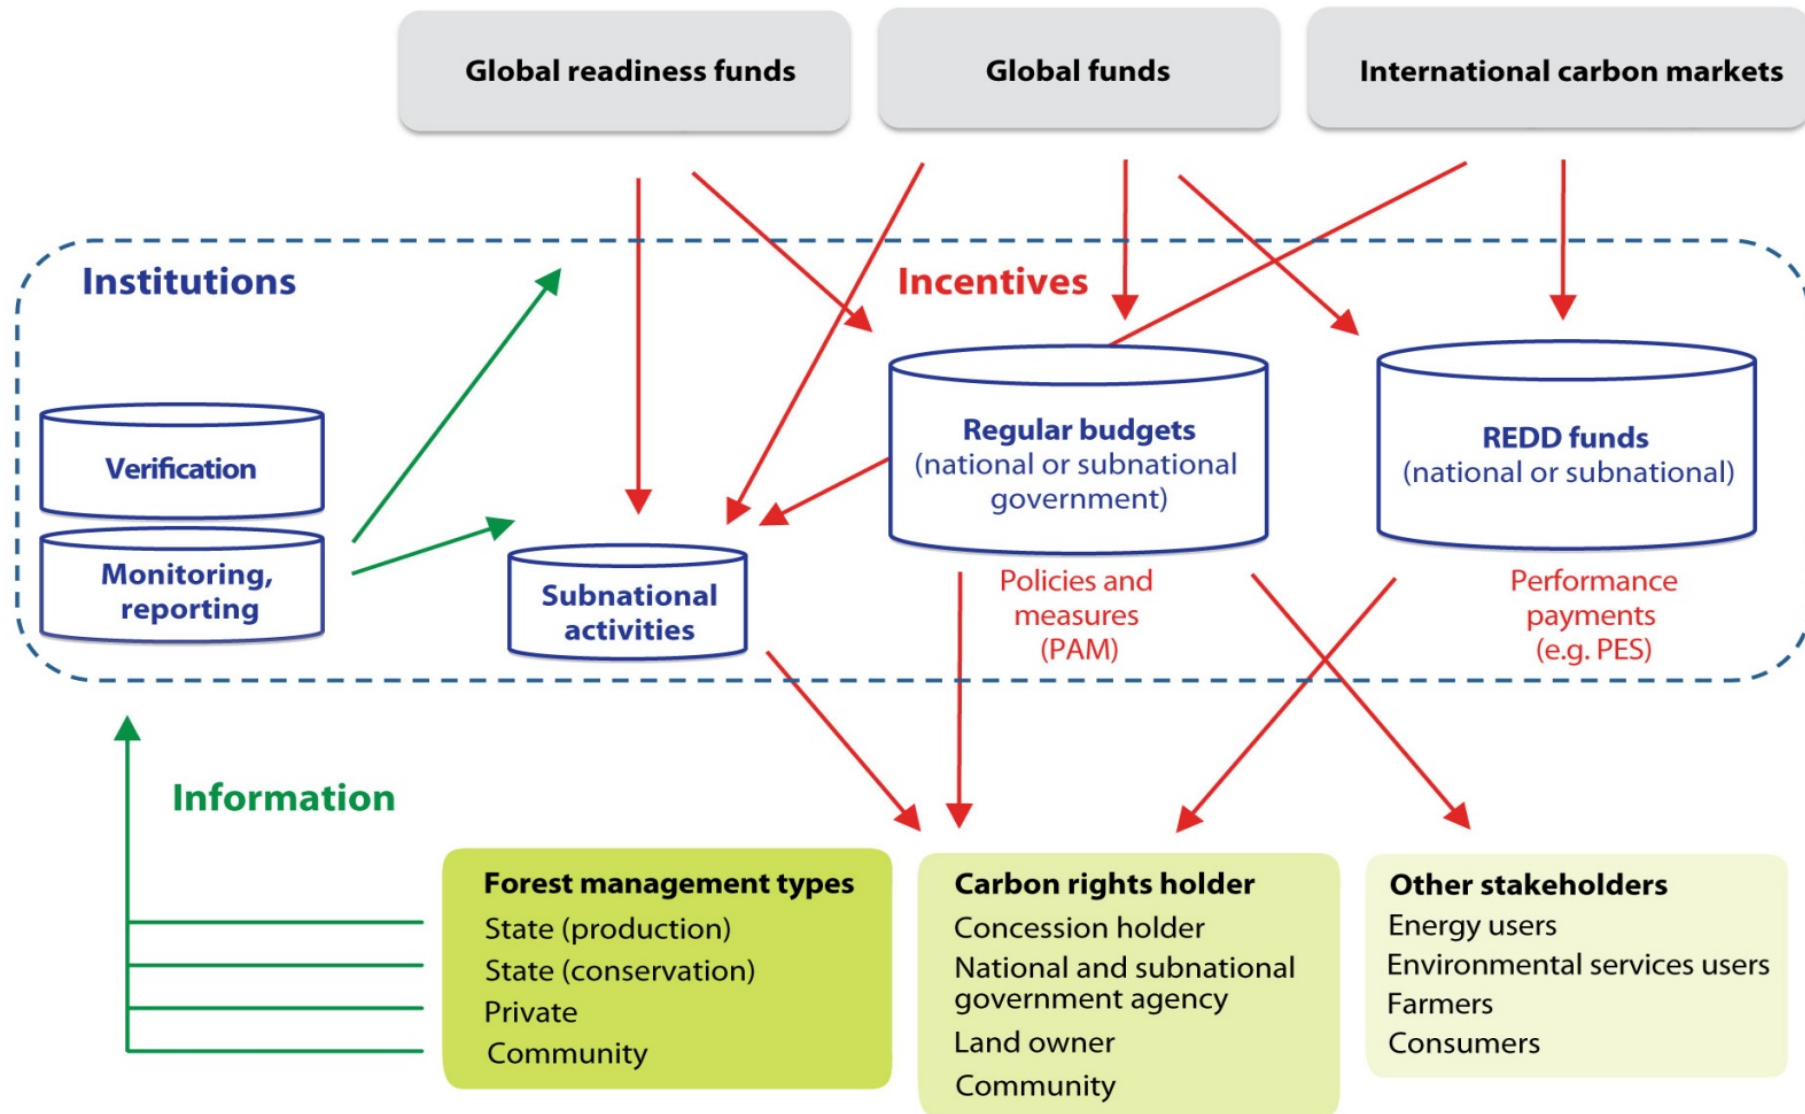

Nested approach

- Sequential: first project, then national
- Simultaneous: both coexist
- The most flexible

BUT

- Harmonisation issues
- Credit sharing questions

2. Institutional structure: The 3Is

MRV systems

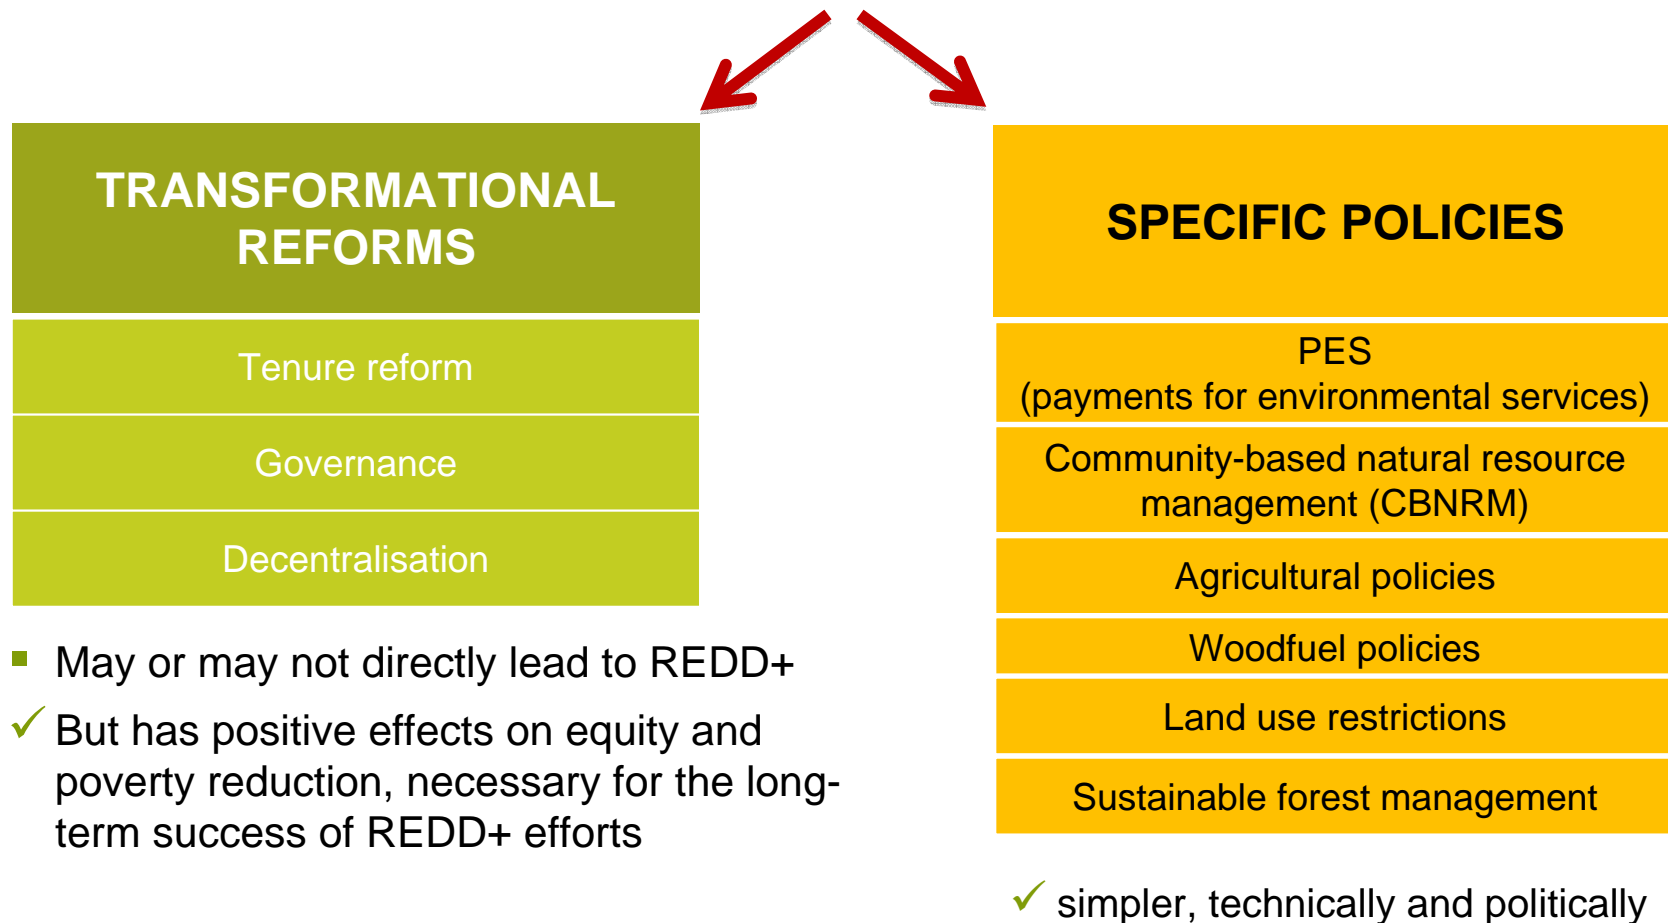

Three major challenges

- Linking measurement, reporting and verification (MRV) to policy design
 - Understand hotspots → spatial targeting
 - Understand drivers → sectoral and actor targeting
- Allowing early participation and interim performance
 - Accept conservativeness principle (discounting)
 - Define proxies to measure interim performance
 - Establish incentives for graduation towards better MRV
- Aligning national MRV and subnational implementation
 - Provide dedicated support to subnational REDD+ activities
 - Integrate community monitoring in national MRV system:
 - cheaper and about as accurate
 - co-benefits: employment, participation, legitimacy

3. Enabling REDD+ through broad policy reforms

- Tenure and rights
 - Tenure reform essential for long-term success of REDD+ (re 3Es: effectiveness, efficiency, equity)
 - Some 'no regrets' REDD policies that should not be missed
 - Carbon rights = precondition for subnational crediting (whom to pay?)
- Corruption
 - Creates severe limitations, in some cases very difficult to address (systemic institutional changes needed)
 - Measurement, reporting and verification (MRV) of carbon and money can reduce risk of corruption
- Decentralisation and community-based forest mgt.
 - Enhancing 3E outcomes and legitimacy
 - Extensive research on success factors (Ostrom)

Two-track approach to REDD+

4. Changing incentives: Agricultural policies

- Reducing Emissions Agricultural Policy (REAP)
 - Prioritise agricultural assistance to high-productivity non-forested areas (and remove deforesting subsidies)
 - Make agricultural policies more location-based (spatially targeted)
- Selective support for extensive agriculture
 - Potential trade-offs
 - Promote conservation agriculture

Woodfuel policies

Figure 19.1a. Projections of fuel wood consumption in developing regions (million m³)
Source: Broadhead *et al.* (2001)

Figure 19.1b. Projections of charcoal consumption in developing regions (million tonnes)
Source: Broadhead *et al.* (2001)

Demand side

- Cooking efficiency
- Fuel substitution

Supply side

- Production efficiency
- Controlling harvest
- Plantations

→ 1. combine policies, and
2. no substitute for
harvest control

Payments for Environmental Services

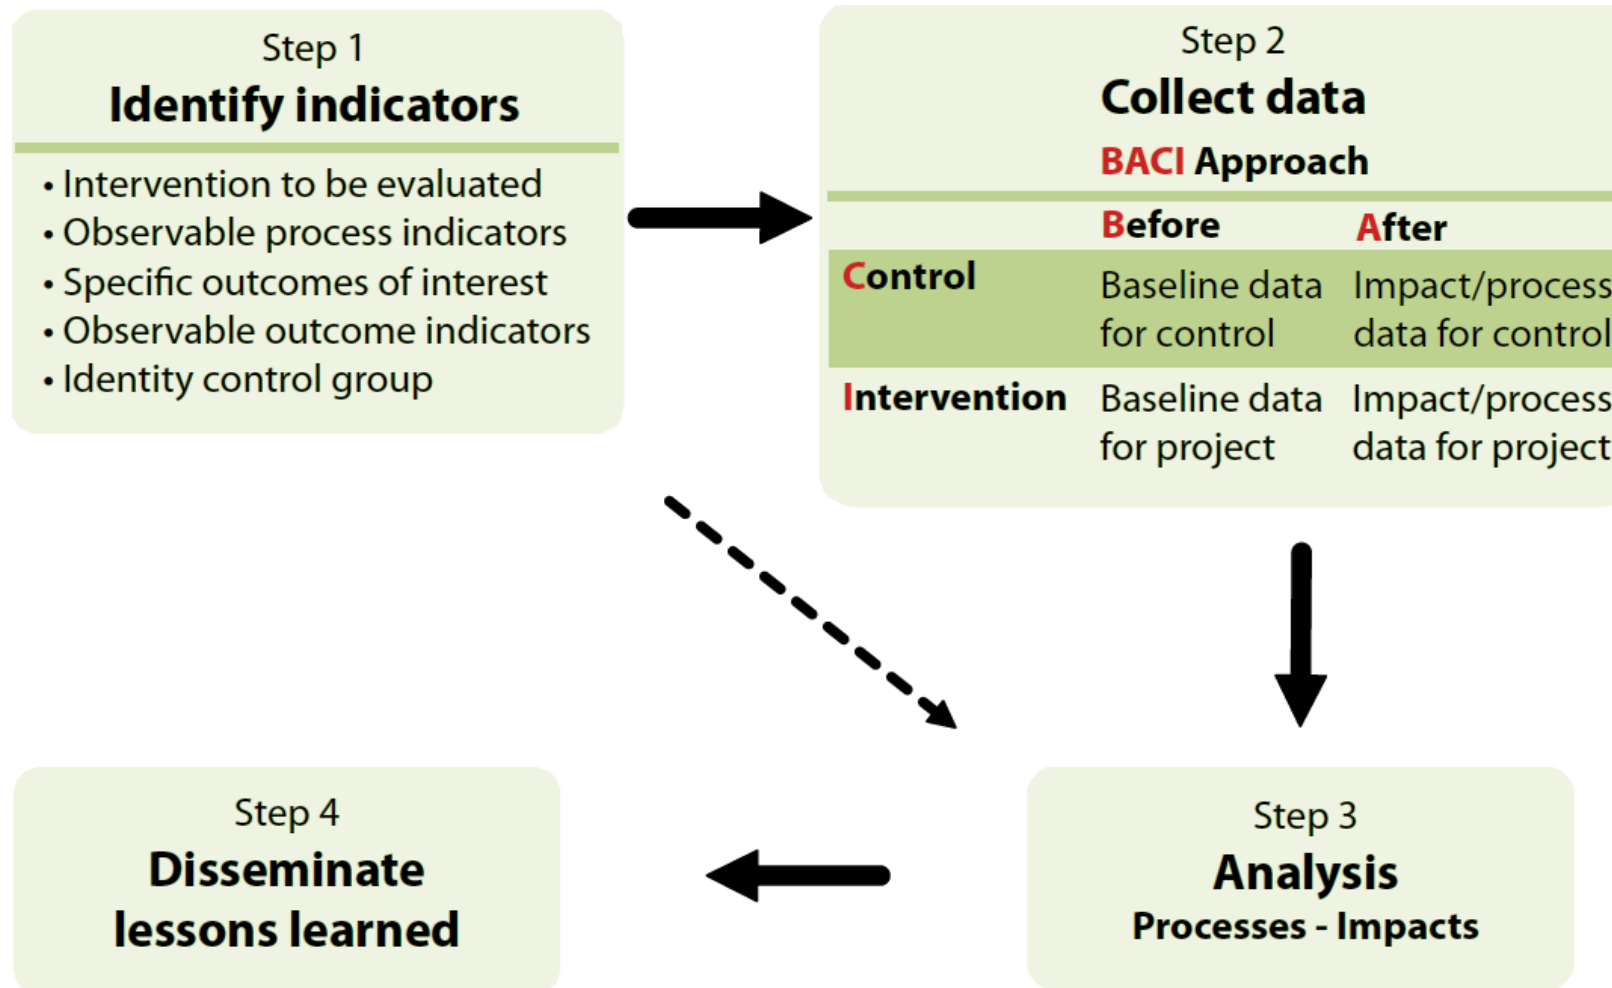

- **Potentially an effective instrument, but many preconditions required**
 - Clear understanding of whom to pay and for what
 - Clearly defined and secured tenure (property rights)
 - Institutions to monitor performance and channel payments
- **Main recommendations**
 - Apply consequent conditionality (pay after performance)
 - Target to high threat/high carbon density areas (additionality)
 - Differentiate payments to increase cost efficiency

Sustainable forest management

- Promote third-party certification (e.g. Forest Stewardship Council) and make accessible for small and low-intensity managed forests
- Require and support the use of reduced impact logging techniques
- Use taxation close to felling site to discourage wastage
- Secure resource access (durable concessions, use rights, private/community ownership)
- Wildfire control and forest restoration

5. Testing REDD+

The landscape of emerging REDD+ projects

179 projects surveyed

- Projects can inform national REDD+ strategies ('mini test cases'), including reform priorities to enable local REDD
- Landscape of REDD+ projects varies significantly:

	Brazil	Indonesia	DRC
Planned projects	20	35	4
Operating projects	2	1	0
Activity	Payments for environmental services (PES)	Buy-out concessions	Readiness
Proponents	Domestic actors	Int'l NGOs	Int'l NGOs

- Third party certification has a major influence
 - CCBS: Climate Community and Biodiversity Standards
 - VCS: Voluntary carbon standard

Key messages

- **REDD+ is a unique opportunity**
 - The money and political will are there, but past performance is mixed
- **Context matters: REDD+ policies need to work on two tracks**
 - Start long-term transformational reforms, or accelerate some of those ongoing (e.g. land titling cadastre)
 - Start short-term policies, but identify 'low-hanging fruits'; important also to demonstrate commitment: 'Yes we can – and will – do REDD'
- **REDD is about PES-like performance-based payments**
 - But strong preconditions apply → rely on some old approaches (e.g. protected areas)
- **Learn from the past while moving forward**

Thank you

www.cifor.cgiar.org

CIFOR advances human well-being, environmental conservation, and equity by conducting research to inform policies and practices that affect forests in developing countries.

THINKING beyond the canopy
